

Scenario: My cousin who plays football and goes to school needs a good way to manage messages and events because his schedule has recently been getting hectic.

Task 1: Create an event called "football practice".

Task 2: Create a message that says "what time is the meeting" and send

Task 3: Create a group

Things to change:

Create a app name that takes user back to home page

Make certain functions more bold or stand out from others

Exit function

Things to keep:

The "at a glance" page

The layout of the screens

Send message function is easy and simple
